

## Agency Recommendation Summary

Developing processes to ensure that healthcare assets are consistently and efficiently utilized is an ongoing challenge. This challenge worsens during times of a disaster or emergency. Funding supports key strategies that allow a more coordinated, timely and unified approach to support access to and maintain the quality of care.

Total Expenditures	<b>\$1</b>	<b>\$0</b>	<b>\$1</b>	<b>\$0</b>	<b>\$0</b>	<b>\$0</b>

## Decision Package Description

### Problem Statement:

Washington State's healthcare system is decentralized and largely made up of private, not-for-profit organizations, which creates a complex network of care. This complexity makes it challenging to use healthcare resources efficiently, especially during shortages caused by disasters or emergencies. The state's system often struggles to respond effectively in these situations, affecting access to and the quality of care.

To address these challenges, there are several key strategies for coordinating healthcare resources during shortages:

1. **Intentional Patient Distribution:** This strategy involves placing patients in facilities based on their capabilities, not just their location, to balance the load among different hospitals. For example, moving patients from an overloaded hospital to one with available capacity can help manage demand and ensure that specialized care centers have space for patients needing specific treatments.
2. **Load Balancing:** This involves transferring patients from overburdened facilities to those with more available resources. For instance, if a burn center is overwhelmed, patients who don't need specialized burn care might be moved to a community hospital to free up space for burn patients.

A national model that supports these strategies is the Medical Operation Coordination Center (MOCC), recognized by the Health and Human Services Administration. The MOCC helps manage patient placement, load balancing, resource coordination, patient tracking, specialty care consultation, and overall situational awareness. This model aims to improve resource utilization and coordination across a region or state during emergencies

### Proposed solution:

Sustain operations of the Washington Medical Coordination Center. In 2020, Washington State set up the Washington Medical Coordination Center (WMCC) at Harborview Medical Center to help manage patient demand across hospitals. WMCC matches patient needs with available resources statewide, ensuring that patients are sent to appropriate facilities. It operates 24/7 and supports rural and independent hospitals, handling everything from specialty care placements (like burn or trauma units) to long-term care.

### National Recognition:

WMCC has been praised by national and regional leaders, including HHS Assistant Secretary for Preparedness and Response, for its role in maintaining high-quality care during times of hospital bed shortages.

*More to be provided in final version*

***(\$1,000 placed in FY 2026 as a placeholder for the Agency Budget System to pull this Decision Package when downloaded. This is only intended as a placeholder.)***

#### **Expected Outcomes:**

The proposed decision package is designed to ensure that the Washington Medical Coordination Center (WMCC) continues to operate 24/7, providing essential patient placement and load-balancing support to acute care hospitals across Washington state. This support is vital for the efficient and effective use of healthcare resources, ensuring patients receive the care they need when needed.

#### Sustained Operational Excellence

**Outcome:** The funding will enable WMCC to maintain its nationally recognized service, which is crucial for managing healthcare resources effectively across the state. By ensuring the continuity of 24/7 operations, the WMCC will help healthcare facilities manage patient loads more efficiently, reducing wait times, and improving patient outcomes.

**Impact:** Healthcare facilities will leverage a centralized resource to quickly identify optimal care locations, minimizing delays while enhancing the patient transfer process. This will directly impact patient outcomes by reducing the time to care, particularly during surges and emergency situations.

#### Enhanced Statewide Healthcare Collaboration

**Outcome:** Additional funding will facilitate deeper collaboration between the WMCC and the DOH in the ongoing development and enhancement of the WA HEALTH platform. This platform aims to be a robust resource for real-time bed capacity and availability across the state.

**Impact:** The integration of WMCC's operational capabilities with the WA HEALTH platform will enhance the platform's utility and accuracy, providing healthcare providers and emergency response teams with reliable data to make informed decisions. This collaboration will ensure that the platform not only meets but exceeds the needs of the state's healthcare system, promoting a higher level of preparedness and responsiveness.

#### Increased Healthcare System Efficiency

**Outcome:** Through the continued support of the WMCC, Washington state's healthcare system will see improved patient placement and resource allocation efficiencies. This streamlined process will reduce the operational strain on individual hospitals, particularly during peak

periods and public health emergencies.

**Impact:** The measurable impact includes reduced average hospital transfer times and increased patient intake capacity, with quantifiable metrics such as percentage reductions in patient wait times and the number of patients successfully placed daily.

**Strategic Resource Allocation**

**Outcome:** The decision package will ensure that resources are allocated strategically to areas of highest impact, enhancing the overall resilience of the healthcare infrastructure in Washington state.

**Impact:** By ensuring the efficient use of healthcare resources, the WMCC will contribute to a more balanced state healthcare system, where resource allocation is directly aligned with demand patterns and patient needs. Evaluation metrics could include resource utilization rates and cost savings from reduced resource wastage.

## Strategic and Performance Outcomes

### **Strategic Framework:**

#### **DOH Transformational Plan**

##### Health Systems & Workforce Transformation

This program leverages previously developed strategies and tools from the COVID-19 pandemic including coordinated decision making to assist health systems maintain access to quality and safe healthcare.

##### Emergency Response & Resilience

This program allows Washington State to respond to periods of scarce resources with strength and decisiveness to minimize the impact of bed, staff, or supply shortages on the lives of Washington's communities. The WMCC supports preparedness, response, and recovery on a broad range of public health incidents that impact the healthcare system.

##### **Agency activity funding:** A014 Access to Quality Healthcare Services

This program supports access to competent and safe, quality healthcare by maximizing available healthcare resources. This maintains access to care, and quality of care in all parts of the State.

### **Performance Outcomes:**

*To be provided in final version.*

## Equity Impacts

### **Community Outreach and Engagement:**

Washington State Medical Coordination Center works in partnership with NWHRN to coordinate and plan with all 93 acute care facilities in Washington. These facilities support all communities including historically underserved and excluded populations.

### **Disproportional Impact Considerations:**

In 2024, the primary users of the load balancing/patient placement services provided by the WMCC were acute care hospitals located in north central Washington. These facilities, both independent and part of a healthcare system, serve and support migrant agriculture worker communities, low-income communities, rural communities, and communities with limited choice in how healthcare is delivered. Having a centralized service that can support healthcare facilities in this region identify available care resources, largely in western Washington, is a significant asset in ensuring access to quality care for disproportionately impacted populations.

### **Target Communities and Populations:**

The WMCC supports all 93 acute care hospitals and their respective patient catchment areas. The wholistic nature of this approach ensures that no communities seeking healthcare during a resource shortage are unable to seek guidance or information from the clinical support at the WMCC.

### **Community Inputs and Incorporation:**

WMCC manages user feedback and input including outreach to additional care providers beyond the 93 acute care hospitals in Washington. Any community input from the continuum of care including needs in behavioral health placement, long term care placement, etc. have been directed to the WMCC leadership
